

# Nedgroup Investments Opportunity Fund

Class A1

May 2018

## ASSET ALLOCATION RANGE

### RISK RATING

### Risk reward profile

Equity and property investments are volatile by nature and subject to potential capital loss. For credit and income instruments, while unlikely, capital loss may also occur due to an event like the default of an issuer. The portfolio may be subject to currency fluctuations due to its international exposure.

### Portfolio profile

The portfolio is suitable for investors requiring moderate levels of capital growth who do not wish to make complex asset allocation decisions between equities, cash and bonds, both locally and offshore. Diversification across asset classes and a maximum equity exposure of 60% helps to reduce risk and volatility relative to an average prudential portfolio. The portfolio complies with Regulation 28 of the South African Pension Funds Act.

<sup>1</sup> The annualized total return is the average return earned by an investment each year over a given time period. Performance is calculated for the portfolio and individual investment performance may differ as a result of initial fees, the actual investment, the actual investment date, the date of reinvestment and dividend withholding tax. Due to the delayed release of inflation data, relevant benchmarks will lag by one month.

<sup>2</sup> Total Expense Ratio (TER), expressed as a percentage of the Fund, relates to expenses incurred in the administration of the Fund. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TERs. Transaction Costs (TC), expressed as a percentage of the Fund, relate to the costs incurred in buying and selling the underlying assets of the Fund. TC are a necessary cost in administering the fund and impact fund returns. It should not be considered in isolation as returns may be impacted by other factors over time including market returns, the type of fund, the investment decisions of the investment manager and the TER. The Total Investment Charges expressed as a percentage of the Fund, relates to all investment costs of the Fund. Both the TER and TC of the Fund are calculated on an annualised basis, beginning 01/04/2015 and ending 31/03/2018.

## Portfolio attributes

- This is a moderate-risk balanced fund aiming to achieve the dual objectives of inflation + 5% per annum over rolling 3 years, as well as no negative 24-month periods.
- The fund will have a maximum exposure of 60% to equities and 25% to listed property.
- Offshore exposure will be limited as per South African Reserve Bank regulations, currently 25% with an additional 5% that may be invested in Africa.
- The portfolio manager seeks to invest beyond the traditional asset classes to add value via a broad range of asset classes and strategies.
- The portfolio manager favours investments with an asymmetric risk-return profile, seeking to minimise downside participation, while capturing an acceptable level of upside.

## Investment manager

- Abax Investments is an independent, owner-operated investment firm founded in 2003.
- AMG, a global asset management company with interests in leading fund management boutiques around the world, owns 25%, with the remaining 75% owned by employees and 3 charitable trusts.
- Abax is dedicated exclusively to fund management across a focused range of equity, multi-asset and fixed income portfolios.
- Abax have managed the Nedgroup Investments Opportunity Fund since inception in June 2011.

## Investment philosophy

- The focus is on quality and the price paid in order to protect downside and capture as much of the upside as possible.
- The manager uses fundamentally based asset valuation models to identify assets which have deviated from fair value.
- Risk is balanced across the alpha sources and the fund is constructed so as to generate performance in a range of market conditions
- Top-down, strategic asset class allocation is married with a bottom-up view of individual securities.
- The fund is structured to maximize expected returns for an acceptable level of downside risk.
- Abax's structured approach of asset valuation and return modelling is fundamental in delivering consistent performance, and controlling risk.
